Other members of our team may also participate in your care, as our staff continues to grow.
Hospitalist medicine is the fastest growing field in medicine. Recent studies have demonstrated that patients cared for by hospital-based physicians are able to return home sooner without any decrease in the quality of the care they receive. St. Mary’s Healthcare has worked with its medical staff to provide Hospitalist service since 2006.

Hospitalists are physicians who specialize in inpatient medical care. Our hospitalist physician will always provide you with excellent inpatient medical care throughout your hospital stay.

Why Hospitalist Medicine?
Your safe, efficient, high quality hospital care requires Team Work. Hospital Physicians, Nurses, Case Managers, Pharmacists, and Therapists work together to provide you with the best possible care. Patients who are in the hospital to heal and recover benefit from the attention of the entire hospital team.

Our Hospitalist Physicians are dedicated to hospital-based practice. A provider is in the hospital 24 hours a day, 7 days a week. The hospitalist physician is also immediately available to you and your family while you are in the hospital. You or your family can contact our office at (518) 770-7530 or (518) 770-7537.

Communication
The Hospitalist Physician becomes your primary doctor for your inpatient stay. The coordination and communication of the team are improved and your hospital care is enhanced.

When you are admitted to the hospital, your doctor’s office is informed about your admission and the Hospitalist will communicate directly with your physician. At the time of discharge, the Hospitalist physician and your primary physician directly communicate in order to plan your follow-up treatments, medications, referrals, and the timing of your next appointment with your primary physician. Copies of the records of your hospitalization are sent directly to your primary physician. Someone is always readily available to explain your discharge if you have any questions.

Care
Your primary physician trusts that you will always be receiving excellent care while you are in the hospital. For patients and physicians, working with the Hospitalist Physician is always a win-win proposition.

Our Hospitalist Physician always strives to treat our patients with respect, listen to all concerns and questions, and explain all of your continued care. Once you are discharged, your primary physician will again take charge of your care.

Our team of Hospitalist Physicians
Thank You for letting them provide you with excellent inpatient care at St. Mary’s Hospital.
